Summary

Computer Science graduate (2026) building production-ready full-stack and AI applications. Proficient in React, Node.js, MySQL, and Python, with a strong ability to design scalable, multi-role systems and integrate real-time AI services end-to-end.

Experience

Software Development Intern (Full Stack & AI/ML)

Jul 2026 – Present

EvolveSpark Services and Solutions (OPC) Pvt. Ltd.

Remote

- Developing a full-stack ERP application using Next.js, React, and Node.js to support academic and administrative workflows in a production environment.
- Implementing ERP modules with secure authentication, API integration, and scalable database architecture using modern full-stack technologies.

Projects

CampusSync ERP — College Management System

[Live Demo](#)

React, Node.js, Express.js, Prisma, MySQL, JWT, Tailwind CSS

- Architected a full-stack college ERP platform with Role-Based Access Control (RBAC) for administrators, faculty, and students, eliminating manual permission management across user types.
- Engineered seven independent ERP modules, including student management, attendance tracking, timetable scheduling, fee management, and document management, each with isolated CRUD workflows and dedicated database schemas.
- Implemented secure JWT-based authentication and role-based authorization using Prisma ORM and MySQL, protecting sensitive academic and financial data across all modules.
- Built responsive React dashboards with live search, advanced filtering, and reporting, enabling administrators to make data-driven decisions without manual cross-referencing.

JARVIS AI — Always-On Voice Assistant

[GitHub](#)

Python, Flask, Groq LLMs (Llama 3.3), Three.js, SSE

- Designed an always-on desktop assistant with wake-word activation and barge-in interruption handling, enabling users to redirect or silence the assistant mid-response for natural conversational flow.
- Architected a multi-threaded Flask backend integrating Groq Llama 3.3 for conversational AI and Groq Vision for live screen analysis, allowing the assistant to answer questions about on-screen content in real time.
- Automated browser, application, and system-level control, including smart web search, entity lookup, and live CPU and RAM monitoring, through natural-language command parsing.
- Built a real-time 3D dashboard using Three.js and Server-Sent Events (SSE), synchronizing a live neural-interface visualization with voice and chat state without page reloads.
- Implemented sleep and wake state management with hot-restart capability, improving session reliability without requiring manual process restarts.

Technical Skills

- **Languages:** Python, JavaScript, SQL, C
- **Frontend:** React, Tailwind CSS, HTML, CSS
- **Backend:** Node.js, Express.js, FastAPI, JWT Authentication
- **Databases & ORM:** MySQL, MongoDB Atlas, Prisma ORM
- **AI & Real-Time Systems:** Groq LLMs, Speech Recognition, Server-Sent Events (SSE), Three.js
- **Tools & Deployment:** Git, GitHub, Vercel

Education

Sir Chhotu Ram Institute of Engineering and Technology, CCSU Meerut

Oct 2022 – May 2026

B.Tech, Computer Science and Engineering

CGPA: 8.6/10

SMT SDLCS Vidya Mandir Sr. Sec. School, Khurja

2020 – 2021

Class XII (CBSE)

96%
